PONUDA NA STOČNIM PIJACAMA

Slaba ponuda

Novogodišnji i Božićni praznici usloveli su slabu ponudu stoke na stočnim pijacama u Crnoj Gori. I dalje su u ponudi dominantni telad, krave za klanje i priplodne krave melezi.

Kada je riječ o cijenama u toku prethodne nedjelje nije bilo bitnijih promjena.

Bar

Zbog proteklih praznika karakterističan je mali obim trgovine. Cijene su sa malim variranjem na nivou prethodne nedjelje.

Berane

Na stočnoj pijaci u Beranama ove sedmice ponuda je bila dobra samo kod kategorije priplodnih ovaca.

Loša ponuda je bila kod svih ostalih vrsta i kategorija žive stoke, a cjenovni trend u umjerenom padu osim kod priplodnih ovaca.

Nikšić

Na stočnoj pijaci u Nikšiću nije bilo ponude žive stoke. Cijene su uzete direktno od farmera i na prošlo-nedjeljnom su nivou.

Pljevlja

Na stočnim pijacama u Pljevljima zabilježena je lošija ponuda stoke, zbog praznika. Cijene se nisu bitnije mijenjale.

Podgorica

Na podgoričkoj stočnoj pijaci zbog novogodišnjih i božićnih praznika veoma se malo trgovalo te su i ponuda i tražnja bile veoma slabe. Šilježadi je bilo najviše, ali u odnosu na prethodne pazare veoma malo. Cijene se nijesu bitnije mijenjale.

Bijelo Polje

U toku prethodne sedmice ponuda stoke na bijelopoljskim stočnim pijacama, zbog praznika je znatno smanjena, ali se trgovina djelimično odvijala i na farmama.

Cijene su uz neznatna kolebanja zadržale prethodni nivo.

ISTOČNO- FRIZIJSKA RASA

Istočno-frizijska rasa nastala je u Istočnoj Friziji (po kojoj je i dobila ime), na holandsko-njemačkoj granici. Ovo je izuzetno ranostasna rasa. Grla ove rase imaju dosta veliku i grubu glavu, jako ispupčenog profila. Suzne jame su im jako izražene, a oči krupne. Oba pola su bez rogova. Noge su visoke, suve i jake. Vime je dobro razvijeno po širini, dužini i dubini, s dobro oblikovanim sisama (mašinsko vime i sise). Koža je tanka, elastična i ružičaste boje. Rasna karakteristika ovih grla jeste da je dio oko sjednjačinih kvrga i rep obrastao bijelom, tankom dlakom a ne vunom.

- **Prosječna visina grebena ovaca je 75-80, a kod ovnova 80-85 cm.**
- **Tjelesna masa ovaca kreće se od 65 - 95 kg, a kod ovnova od 100 -120 kg.**
- **Plodnost u ove rase ovaca je veoma dobro izražena. Od 100 ovaca dobija se 180 - 220 jagnjadi. Veliki broj ovaca,**

skoro redovno jagnje dvojke i trojke.

- **Mlječnost je najizraženija osobina istočno-frizijske ovce i kreće se od 500-600 kg u laktaciji od 200 dana, tj. prosečno 2,5-3 kg mleka dnevno. Ima grla koja daju i preko 1000 litara mlijeka u laktaciji. Međutim, za ovako visoku proizvodnju mlijeka potrebno je grla gajiti u odgovarajućim uslovima izbalansirane ishrane, njege i smeštaja.**
- **Godišnji nastrig neprane vune po ovci iznosi oko 4, a u ovnova oko 5 kg.**

I pored izvanredne proizvodnosti, ranostasnosti i visoke plodnosti ova rasa se nije puno rasprostranila po svetu, jer se vrlo teško uspijeva aklimatizovati u uslovima sredine izvan Frizije. Uvožena je i na područje bivše Jugoslavije u cilju popravke osobina mlječnosti.
